

Information Digital Printing

The digital printer ALLEGRO from Kornit prints in single process without any pre- or post-treatment all silk fabrics of our assortment.

With this one-step technology, this printer does not use a single drop of water. The high water consumption and the resulting wastewater are the environmentally problematic factors when printing with conventional inkjet printers. The ink is GOTS approved and OEKOTEX100 certified.

Our partner BLUR in Portugal prints every design from 5 m corresponding to your file (JPG, PDF or TIF). The templates can be prepared for cutting or laid out over the entire surface. The printing prices are around 9 to 10 € per meter of fabric at a width of 120 cm.

You can also order a test print. Please buy 1,00 m of the desired fabric in the shop and note: TEST PRINT in your order. The cost is 27,00 € incl. shipping (+ VAT) for the print (plus the prize for 1,00 m fabric).

The process for yardage is as follows:

- You buy the fabric in our shop (plus 2 x 20 cm extra)
- You send me your print file
- I send the fabric and the file to the printing company
- Then you discuss all the printing issues with the printer (in English)
- The invoice for printing you will get by the printing company. They ship your fabric by FEDEX.

Happy printing!
